WORKFORCE EFFICIENCY BENCHMARKING TOOL

This tool compares your company's performance with similar businesses in your industry, focusing on two keys:

- Revenue per employee and
- Profit per employee

According to recent data, the most productive companies with the same number of employees achieve:

- 6 times more sales
- 5 times more profit

It's a useful way to:

- Understand how your business performs compared to your peers.
- Identify areas where productivity or profitability can improve.
- Get deeper insight into your company's performance and problem solving.

Higher productivity means doing more with the same or fewer resources whether by producing more goods or offering services efficiently.
